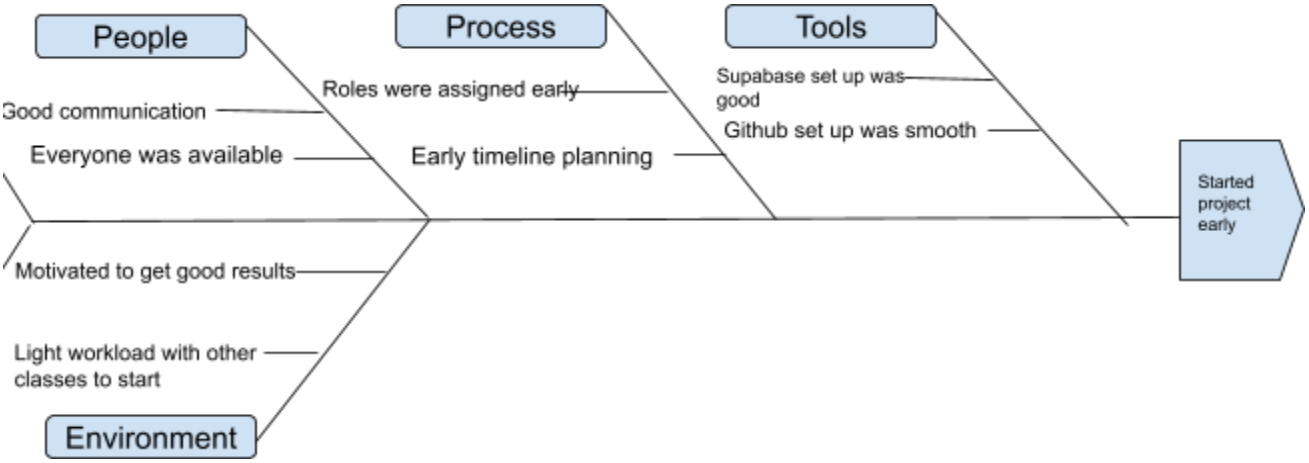
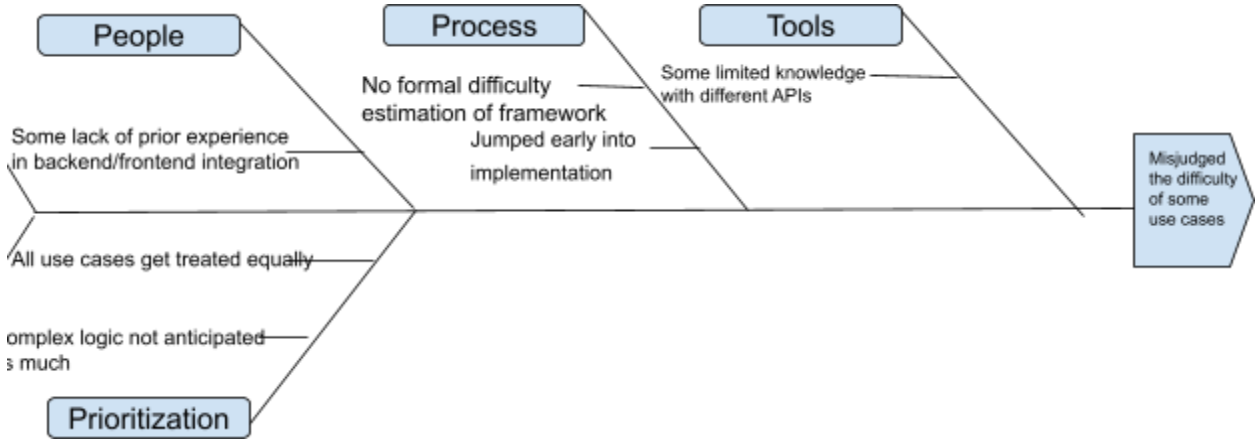
Postmortem Analysis - Group 1 - due 5/11/25

Pro: started the project early



Con: Misjudged the complexity of some features we wanted to implement in our use cases



Recommendations:

- Keep the same early start mindset to give more time to plan, assign roles, and adapt where necessary
- Continue using communication tools like Slack and keep each other informed about any issues/personal updates throughout the project
- Break the work into milestones to help keep everyone aligned and accountable
- Distribute tasks according to each team member's technical comfort levels.
